VANISH AND REVEAL CLEARER SKIN

WHAT'S IN IT?

- ➔ **Hydroquinone:** A topical skin-bleaching agent used in the cosmetic treatment of hyper-pigmented skin conditions including melasma, freckles, lentigines, age spots and acne scars.
- ➔ **Hyaluronic Acid:** Molecule Helps improve skin hydration and production of collagen, fight free radicals, maintain skin elasticity, and even has antibacterial and anti-inflammatory.
- ➔ **Fluocinolone:** A steroid used in the treatment of eczema, dermatitis, allergies and rash, reduces swelling, itching, and redness, medication is a medium-strength corticosteroid.
- ➔ **Clindamycin:** A topical antibiotic used to treat inflammatory acne, reduces the number of bacteria that cause acne, anti-inflammatory effects, makes pimples less red and swollen.
- ➔ **Dexamethasone:** A steroid that prevents inflammation, treats many different conditions such as allergic disorders, skin conditions and psoriasis.
- ➔ **Tretinoin:** Most potent of the topical retinoids, commonly prescribed for mild to moderate acne and photoaging, prevents further degradation of skin by UV exposure.
- ➔ **Retinoic Acid:** Topical retinoid used to prevent and treat early signs of aging including photoaging, hyperpigmentation and treating acne/acne scarring.
- ➔ **Kojic Acid:** Depigmenting agent derived from fungi, blocks tyrosine from forming, which limits melanin production, treats malasma, decreases the appearance of scars, antifungal benefits and antibacterial effects.
